Professional Summary

AI & Software Engineer who builds production AI systems, not notebooks. Currently serving 500+ daily queries through a RAG pipeline with multi-model LLM orchestration, and reduced hallucinations by 30% via intelligent model routing. Previously at Bosch, where I built forecasting models saving INR 3.5–5L annually.

Technical Skills

AI / LLM	RAG Pipelines, LLM Orchestration, Agentic AI, Prompt Engineering, FAISS, LangChain, LlamaIndex, Embeddings, Generative AI, PyTorch, TensorFlow
Backend	FastAPI, Flask, Django, Celery, Redis, WebSocket, RESTful APIs, Microservices
Databases	PostgreSQL, MySQL, MongoDB, FAISS Vector Store
Infrastructure	Docker, Linux, Nginx, Systemd, CI/CD, Git
AI-Native Tools	Claude Code (agentic development), Cursor, LoRA Fine-Tuning, MCP (Model Context Protocol)
Languages	Python, JavaScript, SQL

Work Experience

Software & AI Developer Jul 2025 – Present
Datagrid Solution Pvt. Ltd., Nashik

- Built and deployed a production RAG pipeline with FAISS vector search and multi-model LLM orchestration (Gemini Flash, GPT-4o, Claude), serving 500+ daily queries through FastAPI middleware with sub-second retrieval latency.
- Implemented intelligent model-selection logic that routes queries based on complexity scoring and context, reducing hallucinations by 30% and cutting average per-query LLM cost by routing 70%+ of simple queries to cheaper models.
- Designed semantic chunking strategies with configurable similarity thresholds for FAISS + embedding models (text-embedding-005, text-embedding-3-small), improving retrieval relevance by ~20% over naive fixed-size chunking.
- Spearheading Glammify, an AI-powered jewellery imaging platform integrating Text-to-Image, Image-to-Image, Image-to-Video, and Text-to-Video models via Flask middleware and WaveSpeed API orchestration, with dynamic prompt generation producing consistent brand-aligned visuals across 4 generation modes.

Data Science Intern Dec 2023 – Jan 2024
Bosch Ltd., Maharashtra

- Engineered a SARIMA forecasting model on 12+ months of manufacturing data, achieving 25% higher accuracy than manual forecasts and enabling INR 3.5–5 lakh annual cost savings for the production planning team.
- Built a full-stack ML dashboard in Django providing real-time forecasts to 5+ manufacturing engineers, replacing a manual Excel-based workflow and reducing forecast turnaround from hours to seconds.
- Automated Power BI dashboards tracking 6+ KPIs across production lines, reducing manual reporting effort by 40% and enabling daily visibility for plant managers.

Projects

AI Video Production Platform — Full-Stack AI Platform 2026
Flask, React, PostgreSQL, Celery, Redis, Claude API, ComfyUI, Docker

- Architected an end-to-end AI video generation platform with multi-model orchestration (text-to-image, image-to-video), Celery + Redis async processing, WebSocket real-time progress tracking, and ComfyUI workflow generation, reducing manual video production effort from hours to minutes.
- Designed a 7-table PostgreSQL schema with JSONB for flexible workflow storage, React Flow node-graph visualization, and a provider-agnostic AI service layer enabling zero-downtime switching between Claude, Gemini, and OpenAI.

Autonomous Market Intelligence Agent — Agentic AI System 2026
Hermes Agent, OpenRouter, Telegram API, Linux Systemd, Cron

- Built a fully autonomous AI agent delivering daily stock market intelligence via Telegram — custom AI skills with tool use, memory, and planning; multi-model routing via OpenRouter; and API cost optimization (30+ calls reduced to 15/day). Runs 24/7 as a systemd service with zero manual intervention.

Forest Monitoring System (Deep Learning + GIS) — 1st Prize, 150+ teams 2025
Python, QGIS, U-Net CNN, SVM, Looker Studio

- Engineered a geospatial pipeline detecting deforestation across 64 sq. km by processing 800+ satellite images, achieving 90% segmentation accuracy with U-Net CNN. Sponsored by Forest Department of Maharashtra; results used to prioritize intervention zones.

Education

Bachelor of Engineering in Information Technology 2021 – 2025
Pune University CGPA: 8.1 / 10
